DAILY MESSAGE OF THE GLORIFIED CHRIST JESUS, TRANSMITTED IN THE MARIAN CENTER OF AURORA, PAYSANDU, URUGUAY, TO THE VISIONARY FRIAR ELÍAS DEL SAGRADO CORAZÓN DE JESÚS

Series - Manifestation of Aurora - Part V

At the highest points of the House of Redemption, within the three areas constituted as Redemption 1, 2, and 3, systems must be installed to obtain alternative solar and wind energies.

For this reason, some of the consecrated and residents of the Light-Community must know how to work with these resources through an academic formation about renewable and alternative energies.

This experience in Aurora, after a while, will also allow us to perceive the different alternative energies that can be developed in the other Light-Communities.

It will be an indispensable and essential resource for the Light-Communities, in the long term, to be able to count on these means which nature and the climate offer within each region of the planet.

In this sense, the academic formation of the residents and of the consecrated, focused upon the alternative energies, will allow for further development in the field of knowledge and of intelligence, with the objective of seeking the resources to cover the needs of each Marian Center, as well as of each Light-Community.

For these coming times, it will also be necessary to have an awareness about the correct use of electric power, which supplies about 98.9% of the needs of humanity since its exacerbated consumption harms the Kingdoms of Nature and all of the ecosystems.

Bringing to conscious awareness the fact that everything necessary for living is within the Kingdoms of Nature, the human being will awaken their sleeping senses, which will help them to perceive reality without the need to harm nature.

It is time for human beings to learn to respect Creation and all its components through a more equitable and harmonious way of life.

To develop alternative energies in Aurora will require the formation of a group of brothers and sisters dedicated to academically instructing themselves, as well as for developing the necessary projects.

Aurora has the potential for the utilization of alternative energies through the Sun, the wind, and water.

I thank you for considering all of the Projects of God!

Who blesses you,

Your Master, Christ Jesus
